(a) The filter at work: Inter, 2021/22
single match (noisy)
80% band
filtered strength
shots on target vs average
match of the season
(b) The gain falls as the filter learns
summer break
spikes: promoted teams,
the filter knows nothing yet
Kalman gain on the home team
match of the sample
(c) Normal? Jarque-Bera p = 0.73
observed quantiles
theoretical quantiles
(d) Independent? Bars inside the band
chance (95%)
autocorrelation
lag (matches)
